

WARNING

Tampering with City of Warren Water and Sewer System Property

The city's new water meter reading system is reporting alarms for tampering with the city's new water meters and meter reading systems. Recent repairs by authorized representatives for the city have found such items as missing meters, cut wires, chewed wires, damaged registers, backward meters, missing Meter Transmission Unit (MTU), etc. These problems are due to unauthorized individuals tampering with their water meters who are ignoring the tampering notices that are attached to their new meters and meter reading equipment.

Unauthorized individuals are illegally operating fire hydrants, stop boxes and other parts of the City's Water and Sewer System. These violations are punishable under the City's Code of Ordinances, Chapter 41.

Any water services discontinued due to delinquent water bills can only be restored by a city's authorized representative. Any unauthorized service restoration for unpaid water bills will be subject to fees and prosecution under the City's Code of Ordinances, Chapter 41.

Any of the above unauthorized tampering with the City's Water and Sewer Systems will result in restitution of fees to correct the problem and/or prosecution under City of Warren's Ordinances Chapter 41 Water and Sewers along with any other sanctions so authorized and approved by Warren's City Council.
