

## Delivering for Macomb County

We're modernizing Macomb County's natural gas system by rebuilding and upgrading key infrastructure. The work will help ensure safe, reliable delivery of natural gas to our customers.

**Consumers Energy**

**Sewer Locates** - Crews will mark underground lines in the work area. They may need access to the inside of customer homes or businesses to locate sewer lines. Any flags or marks should be left in place until we complete our work. Customers should consider marking known sprinklers, invisible fences, etc.

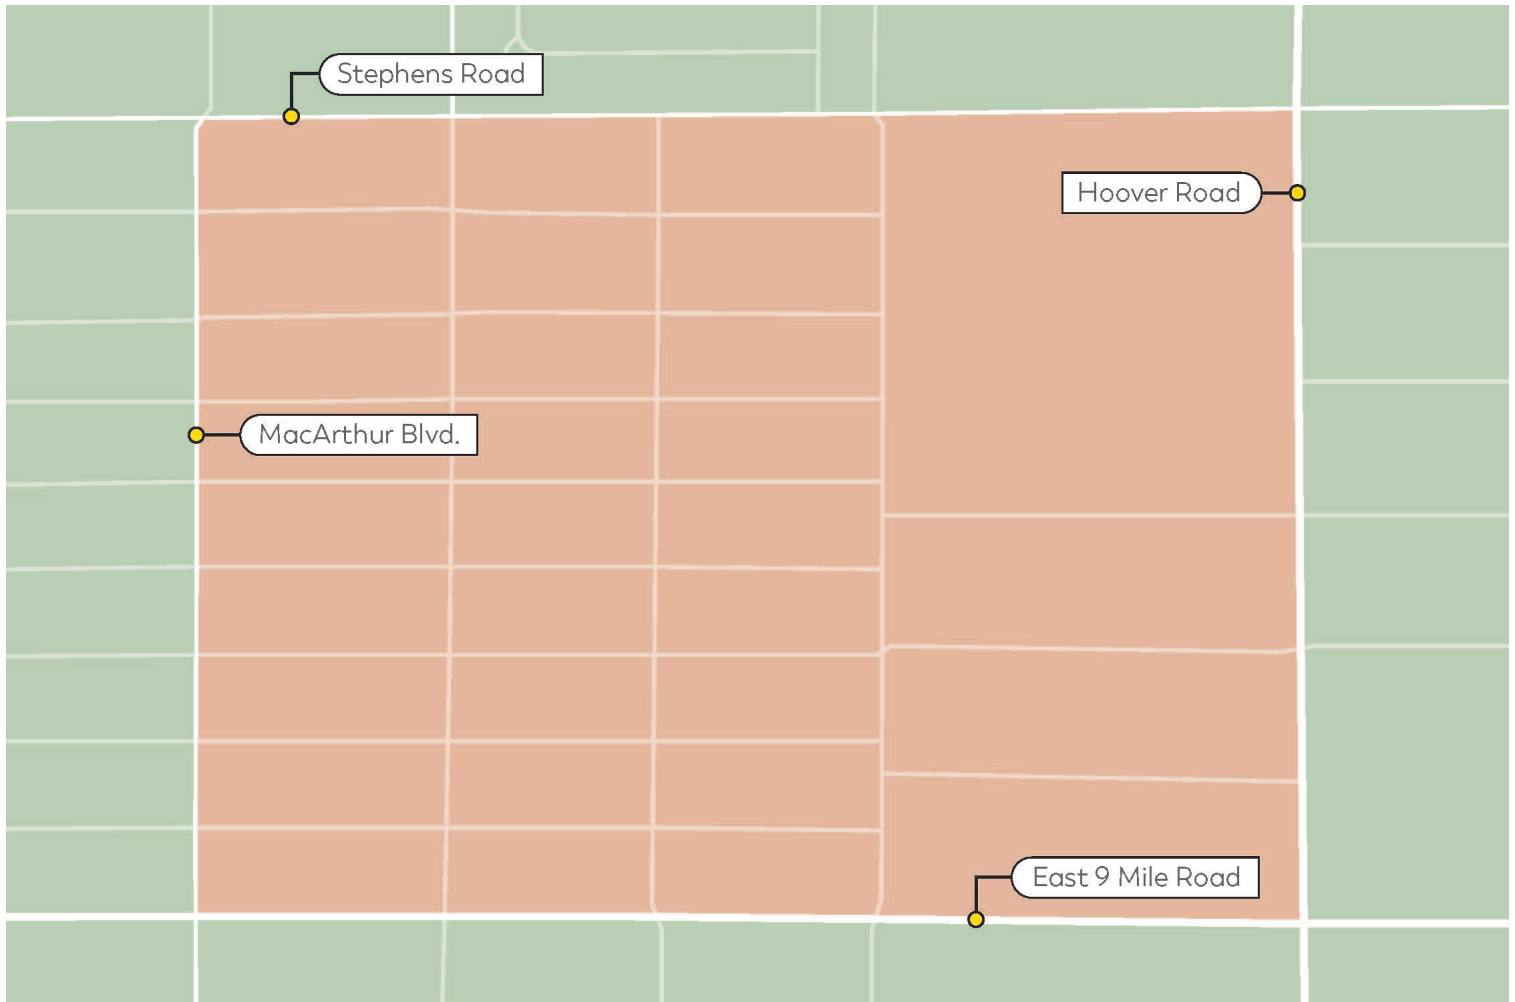

**Construction** - Crews will perform work to install new, upgraded pipeline and may be able to bore underground where possible, minimizing road closures and other disturbances.

Natural gas service will be interrupted for less than an hour. When complete, a crew member will relight pilot lights. Customers may opt to do this on their own. If they aren't home, we will leave instructions to request a relight.

**Restoration** - When all work is complete, all affected roadways, sidewalks and other areas disturbed by construction will be restored fully. Some restoration may be delayed because of weather (freezing conditions, etc.).

## What's Happening?

Pre-construction work is already in progress. Once complete, construction will begin in July. The map above shows where we'll be working through December.

The unique DAPP code helps us identify the work if you have any questions. Please contact us with any concerns.
